

Basic Printing Operation and Process (Operators)

Objectives: Given the training by the instructor and student guide, in the balance of machine and process exercises, the student will demonstrate a complete understanding of the SMT printing process and general safety guidelines.

At the end of the Course, the student will be able to operate and control the MPM Printing Machine, create a good setup and print first quality PC boards.

The student will be able to:

- Identify risks on safety and precaution required to operate the equipment.
- Identify all the parts of the machine.
- Navigate through all Menus and Screens of the programs.
- Understand and interpret all ERROR messages and SPC Data.
- Describe the key elements for a good printing.
- Print PCBs.

Prerequisite: NONE

Required Equipment: MPM Series AP/ UP Screen Printing Machine.

Duration: 1 - 2 Days

Schedule: Flexible
